

## RISIS GENERATING JEWELLERY

*"We strive to design and deliver quality jewelry and giftware of special significance to our clients. We believe that Genometri combined with rapid Prototyping will not only help us to further expand the range of our offers but also to extend the much-valued customized service of old where clients could sit with the craftsman to design special and unique pieces for themselves."*

- Sunil Amarasuriya, Managing Director  
Risis Pte Ltd.

**RISIS is a premier Jewelry and Giftware company in Singapore that has a history of combing design and technology for creating new possibilities. It made its mark by pioneering the electroplating of natural orchids for creating gold and silver jewelry in Singapore.**

## Custom Design

Custom Made jewelry is time consuming and expensive to make. Each item has to be individual designed and crafted. Genometri allows to model jewelry in such way that that it can be easily varied to suit different stone sizes, stone arrangements and individual tastes of clients. Each design therefore need not start from scratch. The customer can see realistic pictures made possible by hi-quality rendering before approving the design – reducing the disappointments that may arise from disparities between the final outcome and the client's desires.

## Many Designs

The same technology can also produce multiple variations that are very different to each other allowing RISIS to offer 100 different type of orchids for example or design limited edition of seasonal offerings.

## Future Plans

We are currently developing a studio to make the best use of this technology says Mr.Sunil Amarasuriya. We look forward to using this technology to allow the customer to participate in the design process. *"This technology is certainly going to change the way Jewelry is conceived designed and manufactured."*
